# How to Sideload Apps Onto Your Amazon Fire Tablet

**JOE FEDEWA** [@tallshmo](#) AND **JASON FITZPATRICK**

UPDATED MAR 2, 2022, 4:35 PM EDT | 2 MIN READ

Amazon

Amazon Fire tablets have a lot to offer, but there's one big catch. The Appstore has far fewer apps and games than you can get on an [iPad](#) or from the Google Play Store. Thankfully, we can solve that problem.

## Why Would You Want to Do This?

Amazon ships [Fire tablets](#) with its own store for apps and games. While the [Amazon Appstore](#) has most of the heavy hitters (Netflix, Spotify, Instagram, etc) the selection is not nearly as good as the Google Play Store.

**EXHIBIT 11408**

For reference, the Play Store has over 3 million apps and games while the Amazon Appstore has only around 500,000. But here's the thing—those 3 million and more apps in the Play Store are compatible with your Fire tablet.

Advertisement

Sideloading is the method of installing apps from outside the Amazon Appstore. At their core, Fire tablets run Android, and Android supports sideloading. It works just like [sideloading on an Android phone](#).

One thing to keep in mind about sideloading apps is they won't be able to receive automatic updates. That process is handled by app stores, which we're not using. You'll need to manually re-install new versions of apps and games if you want to stay up to date.

**Warning:** Sideloading is disabled by default for a reason. The Amazon Appstore has security protocols to make sure the apps and games you download are safe. It's certainly not perfect, but it's something. Sideloading apps circumvent these protocols, so you need to be careful about where you get the apps. [APK Mirror](#) is our recommended source for sideloading.

## How to Install APK on Amazon Tablet

The first thing we need to do is get an APK file to download. You can go to [APKMirror](#) in the Silk Browser on your Fire tablet and download the app you'd like to sideload. Make sure to opt for "APK" files, not the ones labeled "Bundle."

Variant	Arch	Version	DPI
258 BUNDLE 18 \$			
100016226	arm64-v8a + armeabi-v7a	Android 6.0+	480-640dpi
March 1, 2022 EST			
258 APK			
100016226	universal	Android 6.0+	nodpi
March 1, 2022 EST			

After it's done downloading, tap "Open" from the message at the bottom of the screen.

Advertisement

A pop-up message will inform you that you need to allow the app to "install unknown apps" before you can install the APK. Tap "Settings" to be taken there.

Toggle the switch on to “Allow From This Source.” You only need to do this once for each app that you use to install an APK.

Now you can go back to the previous screen and tap “Install” to finish installing the APK.

By submitting your email, you agree to the [Terms of Use](#) and [Privacy Policy](#).

That's it! The app will be added to the home screen on the "Home" tab. This is a pretty simple process that will work for the majority of Android apps and games.
